

# Vercel/Netlify

## Long Course: Week 6

---

INSTRUCTOR  
Daniel Omajali

# **Introduction**

Hosting a website online simply means taking the contents of the website online so it can be accessible by others on the internet.

We would be making use of GitHub and Vercel/Netlify to host our website online.

GitHub would be used to host our website contents (pages, images, videos, etc.)

Vercel or Netlify would provide the domain address/name that would link up to the GitHub where our website contents are

# **Vercel/Netlify**

Vercel or Netlify are the platforms that would provide the domain address/name that would link up to the GitHub where our website contents are.

Their website addresses are [www.vercel.com](https://www.vercel.com) and [www.netlify.com](https://www.netlify.com)

## **Task:**

- Link GitHub account to vercel or Netlify by signing up with github
- Import repository that contains the website contents to vercel or Netlify
- Deploy
